

Quick Start Guide for Tuning

Getting Started

1. Enable Bluetooth on your phone and ensure preferences, sharing, and location services are enabled.
2. Connect the device to your vehicle's OBDII port and turn the ignition to the run position (or engage run mode for push-button start vehicles).

3. Open the app and allow PredatorX to find and connect to nearby devices.
4. Navigate through the feature screens, then select "Create an Account" and enter your information, or log in if you already have an account.
5. Verify your VIN when it is displayed on the screen.
6. Go to "Vehicle" > "Vehicle Tunes" > select the desired tune level. The app will prompt you to download custom files for your vehicle.
7. Select the tune level that matches your fuel octane grade and click "Install" or "Customize" if you want to adjust tuning options/parameters.
8. After the tune is built, select "Upload to Vehicle" and confirm when prompted.
9. Once the process is complete, you can start and enjoy driving your vehicle.

LED Indicators

- Fuschia (solid): Updating Wi-Fi/BLE chip
- Green (solid): USB in use
- Yellow (flashing): PredatorX device's OS is updating
- Blue (flashing): BLE is discoverable
- Blue (solid): BLE is connected
- Red (flashing): Error
- Orange (flashing): Programming ECU or TCU
