

# **V2 LED SIDE MIRROR MARKER LIGHTS**

(2008-2016 F-250 / F-350)

---

## INSTALLATION INSTRUCTIONS

### CONTENTS

---

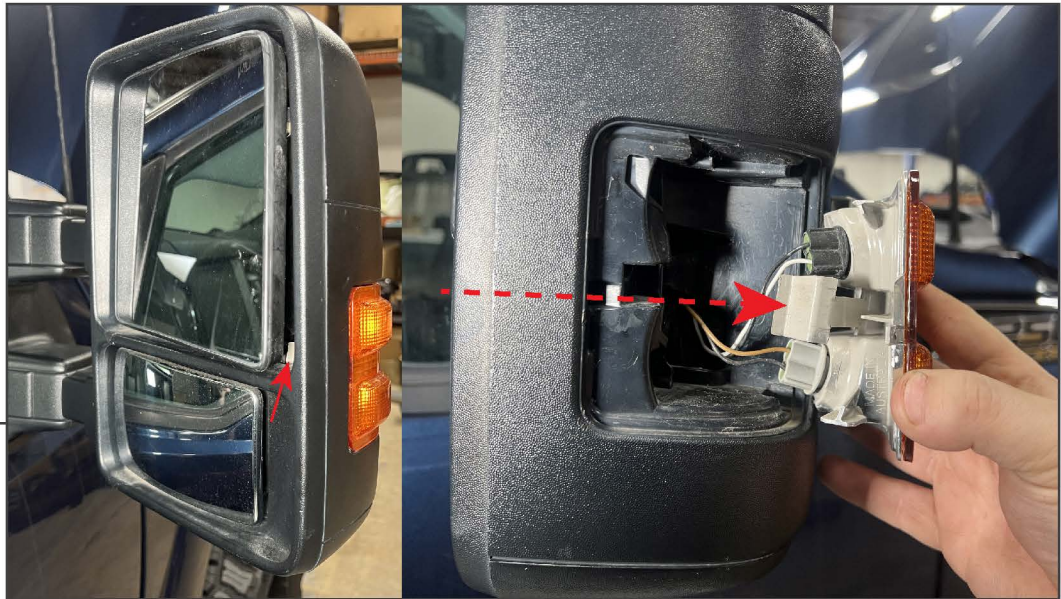

(1) LH Mirror Light  
(1) RH Mirror Light

### TOOLS REQUIRED

---

Small Flathead Screwdriver

## STEP 1

Adjust the mirror upwards to gain access to the light mounting tab inside of the mirror. Using a small flathead screwdriver, press the tab towards the light and pull the light assembly outwards from the mirror.

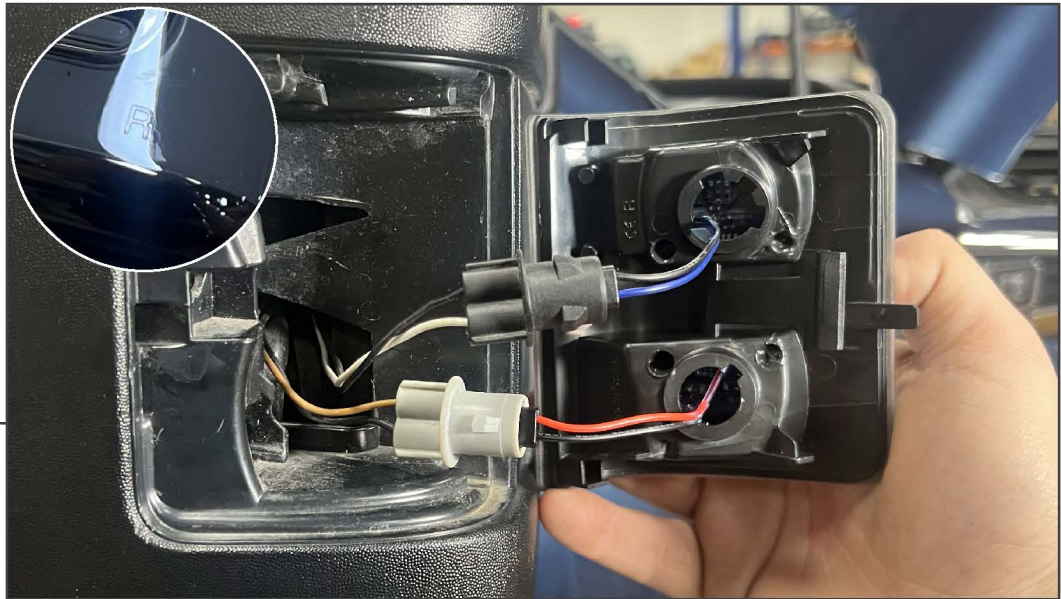

## STEP 2

Twist each bulb socket counter-clockwise to remove the light bulb socket from the light housing.

Remove each light bulb from the light socket.

### STEP 3

Identify the LH/RH light assembly using the embossed label in the lens/housing ("L" & "R").

Connect the bulb-style connectors on the light to the vehicle light bulb sockets. The connectors must be inserted the same as shown above. If accidentally connected opposite, Fuse # 13, 14, or 40 in the vehicle interior fuse block may blow. Ensure Black(-) on chassis goes to Black(-) on the light.

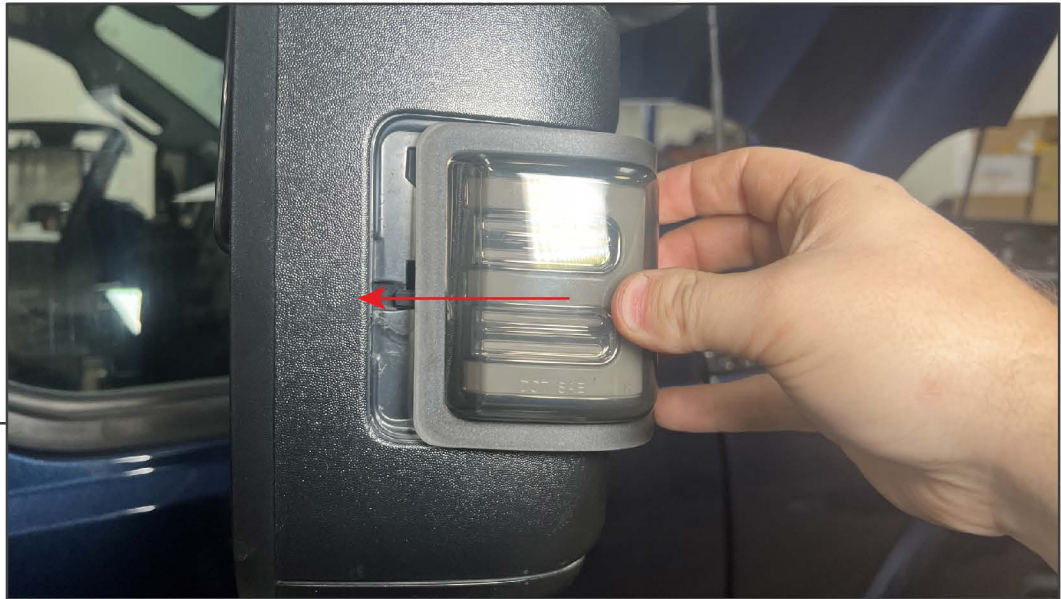

Test turn signal and parking lamps for functionality.

### STEP 4

Neatly route the wire leads into the light housing, and twist the light bulb sockets into the light assembly.

**STEP 5**

Align and press the light assembly into the mirror until the latch audibly clicks into place.

Re-adjust the mirror glass the desired position.

**STEP 6**

Repeat steps 1-5 for the remaining mirror light.

Installation is now complete.
