

2015-2017 Ford F150 LED License Plate Lights

Contents:

(2) LED License Plate Lights

Tools Required:

-Flat Head Screw Driver
-Trim Panel Removal Tool

Step 1\\

Using a flat head screw driver or trim panel removal tool, carefully pry the factory license plate light from the bumper.

Step 2\\

Next, turn the light socket and harness counter-clockwise to release from the factory license plate light. Then carefully pull the light bulb away from the socket.

Step 3\\

Plug the new Axial light harness into the factory light bulb socket. ****Note:** Test lights for proper function at this point. If the light is not working, unplug the harness from the socket and rotate 180 degrees and test light again.

Step 4\\

Install the new Axial license plate light until it clicks in place. Installation is now complete.
