PLUG & PLAY REMOTE START SYSTEM
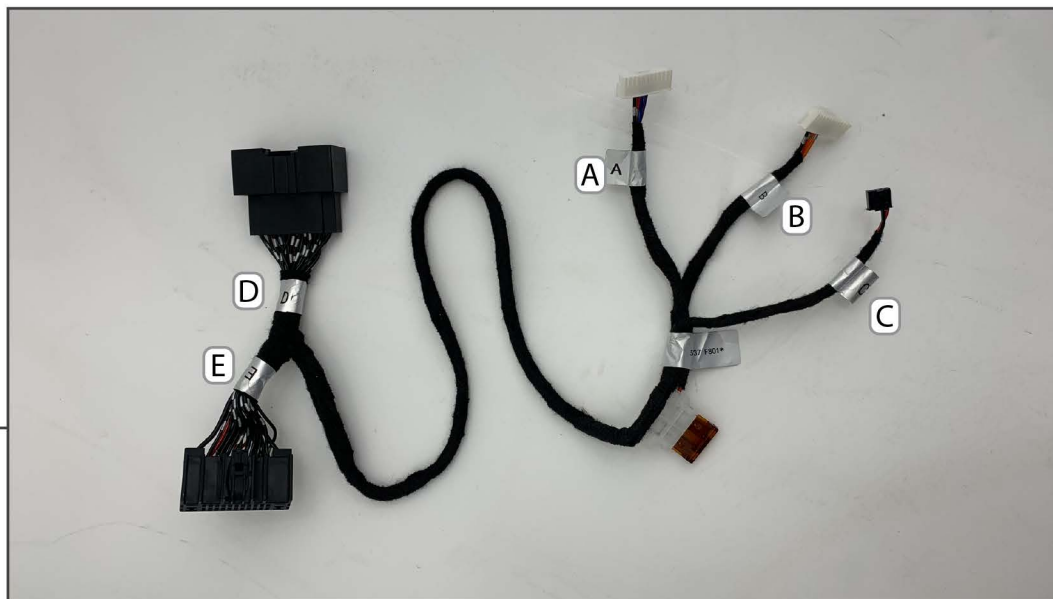

(2015-2020 F-150)

INSTALLATION INSTRUCTIONS

CONTENTS

(1) Control Module
(1) Wiring Harness
(3) Cable Ties

TOOLS REQUIRED

N/A

SKU # T547983

STEP 1

Identify the plugs on the wiring harness.

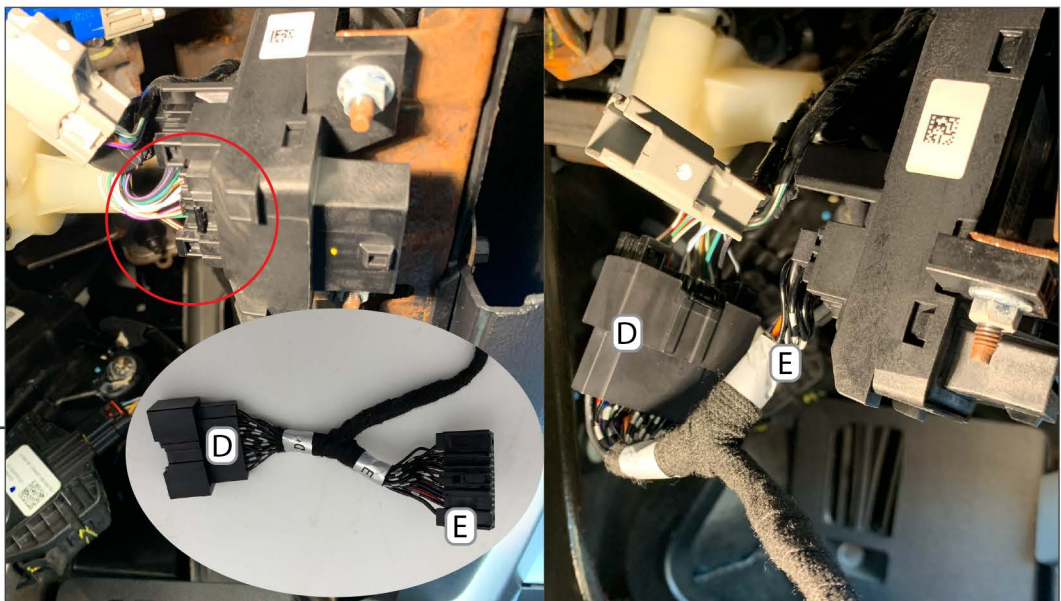

STEP 2

Locate the vehicle's OBDII port. It is located at the bottom left side of the dash panel.

STEP 3

Begin by assembling the wiring harness and control module. Connect pins "A" and "C" into the control module.

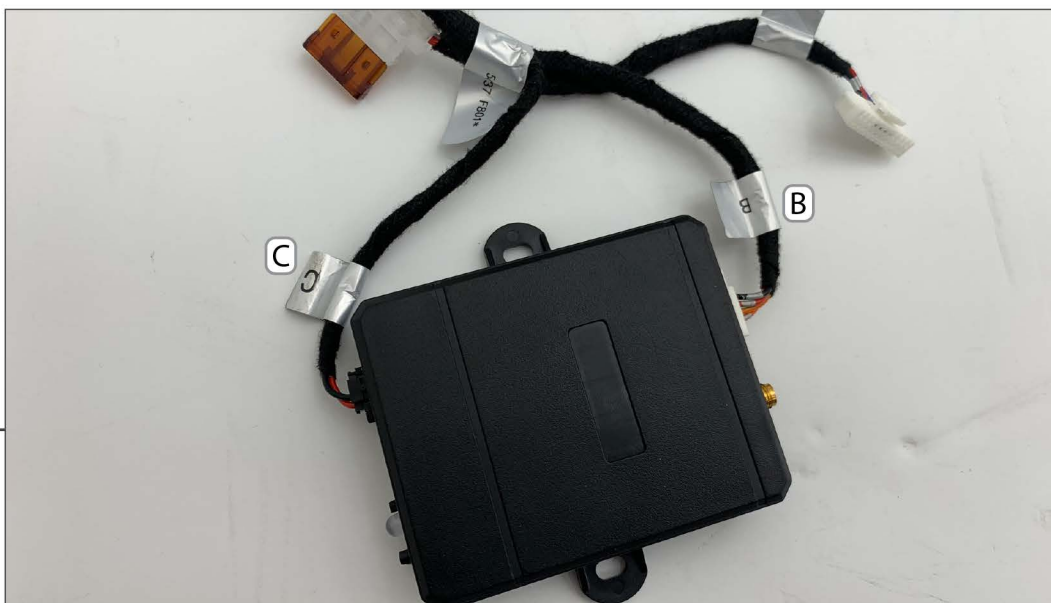

STEP 4

At the vehicles OBDII port, reach behind the dash and unplug the factory plug. Install connectors "D" and "E" between the OBDII port and the factory plug.

STEP 5

Start the car as you normally would. Watch the LED on the control module turn red, green, and then red again. Turn the vehicle off and remove the key.

STEP 6

Complete the installation by unplugging connector "A" and plugging in connector "B". "B" will remain inserted in the control module. Tuck the wiring harness and control module behind the dash. Use the provided cable ties to secure everything out of the way. Press the lock button on the key fob (3) times. There will be a pause and then the vehicle will start. This completes the installation.
