LED FOG LIGHTS

(2015-2020 F-150)

INSTALLATION INSTRUCTIONS

CONTENTS

(2) LED Fog Lights
(2) Allen Screws
(2) Flat Washers
(2) Screw Inserts
(2) Springs

## TOOLS REQUIRED

Phillips Screwdriver
Flathead Screwdriver

STEP 1

Locate the fog light from under the vehicle. Remove the fog light bulb from the housing by twisting the light socket counter-clockwise. Remove (1) Phillips screw securing the fog light assembly from the bumper.

Note: The spring will be removed with the screw. Hardware will not be reused.

STEP 2

Using a flathead screwdriver, pry back on the plastic bumper fog light retainer. While prying back, push the fog light towards the outside of the vehicle. Once dislodged, repeat this step to the opposite side of the fog light. The fog light will be removed through the front of the bumper.

STEP 3

Press the plastic screw insert into the new fog light. Install the fog light into the vehicle by pushing the fog light through the front of the bumper until the light audibly clicks into place. Using (1) spring, (1) flat washer, and (1) Phillips screw, secure the fog light to the bumper.

Note: Mounting screw will also be used as light beam adjuster screw, adjust as necessary.

STEP 4

Unplug the original fog light bulb. Plug the new fog light directly into the vehicle fog light harness. Repeat steps 1-4 to the opposite side of the vehicle.

To switch between White & Amber, press the fog light button quickly twice until the color switches.

Installation is now complete.
